MARCH, 2017

We certify that Industrial Wire Rope shipment of the following material:

5/8" TWISTED EXTRA-LENE W/1 RED TRACER
(Item # 570200-00600-000-IR)

9,235 LBS
Average Break Strength

5:12 Safe Working Load

Average break force test results apply only to new rope when tested according to Cordage Institute Specifications, and to the Cordage Institute Standard Test Methods for Stranded or Plaited ropes. Break Force strengths can vary due to construction and yarn material.

Safe Working Loads are expressed as a ratio to tensile strength. Persons should be warned against standing in line with the rope. In all cases where any such risks are present, or there is any question about the loads involved or the conditions of use, the safe working load should be substantially reduced to the safe working loads, and the rope should be inspected.
